Bike Assist

08.20.2016

John Riepe
UCF Coding Boot Camp

Overview

This web application is designed to help bicyclists track their ride data, chart their data, find bike routes, and find directions with bicycles in mind.

Its benefits are to help the avid bicyclist keep fit by tracking his/her workouts and finding new routes to make it more interesting.

Goals

1. Develop app in timely fashion using Laravel for framework, mySQL for storing user data and ride data. Chart will be developed using Charts JS.
2. If time permits, I'd like to add Calorie burned information.

Specifications

Laravel, Google Map API's, ChartJS, Facebook Authorization.

Milestones

1. August 20, 2016

○ Submit idea, and supporting design.

2. September 10, 2016
   ○ Working application. Mini presentation.

3. September 17, 2016
   ○ Final Project due.

4. September 28, 2016
   ○ Presentation Day!
